**CONCEPT USED: <1>** *Know to connect the LED with ardunio and breadboard .*

        *<2>code to apply LED in order to BLINCKING.*

**LEARNING AND OBSERVATION:<1>**ial *We have learn about the LED and knows its functionility.*

        *<2>we learn about breadbord circuit design and ardunio embedded system.*

**PROBLEM AND TROUBLESHOOTING:<1>***all the connectivity should be fully tight and should in working condition so,before using it once u have to check it properly.*

**PRECAUTION :<1>***We shold handle it properly so that nothing can be distorted.*

        *<2>we should keep our connectivity neat and simple ,it should not be more complex.*

**LEARNING OUTCOMES:<1>***we come to know the desire information about how the electrical element are being controlled by ARDUNIO.*
